No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                           SUBCELLULAR LOCATION: Periplasmic.
INDUCTION: In addition to cAMP-mediated control, this enzyme induced when bacterial cultures reach stationary phase; its synthesis is triggered by phosphate starvation or a shift from aerobic to anaerobic conditions.
SIMILARITY: Belongs to the histidine acid phosphatase family.
                                                                                                                                                                                                                                                                                                                                                                                                            phosphate.

CATALYTIC ACTIVITY: Myo-inositol hexakisphosphate + H(2)0 = 1D-

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                      Score
